

Master editing and animation software - Selection of courses

With individual studies tailored for amateurs, artists and professionals

Jump Cut is the leading school in Israel for films editing and animation studies, including mastery of After Effects and accompanying software.

In our digital age, video is accessible to all, and offer us with access to various fields of interests - photography and editing - for documentation, expression and creation.

Taking pictures and shooting videos are expressions of our creativity, but we are left with a wealth of material that we can use. The wonderful possibilities of video editing and animation call films lovers to celebrate their personal creativity.

This vision of professional training, which views software as a tool for creative expression, has led us to develop personal courses that provide the tools and expertise in these applications to people who love this art form.

Our personal course is designed for film-making enthusiasts, teachers and professionals who require professional retraining. This teacher-student format (with an option for 2 students) allows development and progress at each student's own pace. Learning the software is a user-friendly process that combines tools for experimenting and practical experience with editing instructions. We developed our unique teaching methodology and knowledge in our professional editing courses, and are quite the experts in problem solving and convenient work methods. All teachers are active editors or animators working in the field.

Wishing you good films, Tamar Yaron

Editing Courses

- AVID MC Soft
- Premiere CC
- Final Cut Pro X

Animation and Design courses

- After Effects
- Photoshop for video
- Cinema 4D

- ✓ Courses enable progress at your own pace, and adaptation of the content to your unique needs

AVID Media Composer Courses

AVID MC Soft is the predominant editing software used across the Israeli and worldwide for professional editing. Jump Cut was the first to teach it (1993), and remains the only teaching institute in Israel that is certified to teach AVID, as an Avid Learning Partner (ALP).

AVID MC Soft offers excellent editing solutions for all types of films. Its centrality in the world of film editing is due to its ability to handle very large volumes of raw materials and its support for communication with image finishing processes in post-production studios.

Our expertise and experience in teaching the software in our professional courses has been leveraged to carefully design the personal curriculum, resulting in mastery and proficiency in working with the software. Over the course of studies, the student edits a personal film.

Studies need to devote time to individual work between classes, and must have a suitable computer, with Avid MC 8* software installed.

Courses:

1. **Basics of Editing with AVID MC (18 hours)**

The course provides the software tools required to edit a film and covers the process of creating an edited segment.

Content: Basic editing, refining the edit, trimming dialogue, packaging and output, mixing sequence audio, basic effects, introduction to audio and visual, marquee, import & export files, approval and output, technical fundamentals

Applicative: principles of video clips or reports / soundtrack design

A personal project can be edited during the course.

2. **Advanced Editing and Special Effects with AVID MC (15 hours)**

Along with advanced editing tools for special effects that enable enrichment of the language and style of films, the software offers a host of effective solutions for media management, that are extremely important for getting the most out of your system. The course includes classes and exercises.

Content: 3D, intraframe, color correction, time wrap, motion tracking, media management: media tool, attic, import/export files, settings.

3. **AVID MC - Advanced (3 hours) – for professionals only**

Content: Online, Consolidate, preparation for Pro Tools

4. **AMC 101+110 (40 hours)**

AVID User Certification

Mastery of software tools and work processes according to the content of the courses (1 + 2 + 3), in preparation for the Avid User certification exams.

Price includes E-book containing course contents + 2 certification exams.
